

Custom Power Cart with Built-In MicroCool™ Refrigerator

Medical-Grade, Temperature Proficient, Whisper Quiet™

Refrigeration Beyond Imagination

The Custom Power Cart with Built-in MicroCool Refrigeration is a medical-grade solution, ideal for use in tight spaces. The cart is customized and designed to maneuver in any medical environment. The built-in MicroCool refrigerator will assist in both streamlining the flow of delivery of nutrition from dietary or medication from the pharmacy to the patient's bedside or refrigerated items needed for a procedure in the operating room; while keeping all items properly cooled within ADA and JCAHO guidelines. Fewer trips to your nutritional preparation rooms, laboratories, pharmacies or even just stepping out of the OR to retrieve a refrigerated item equates to fewer errors while increasing productivity, work flow and more importantly, time at the bedside or operating room table. The Custom Cart has the ability to run on battery for up to 4 hours or on extended battery for up to 24+ hours, providing redundancy for power needs in case of generator/power loss. In addition to the on board refrigeration unit(s) the cart can also power up to (4) additional pieces of medical equipment while running off battery. Creche Innovations will work with you to customize a cart that will meet your individual facility/department specifications. From refrigerators to IV poles, to mounting sharps containers or trash receptacles (the possibilities are endless) to meet with your needs. Should your needs change in the future, your Cart can be easily reconfigured to add/remove components to maximize functionality and minimize cost.

Power Cart Dimensions:

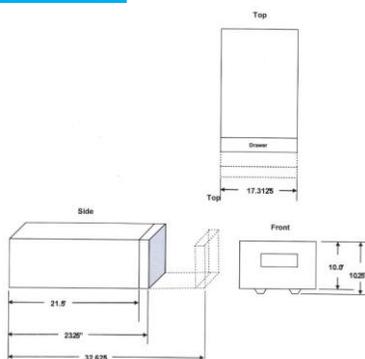

MicroCool™ Refrigerator Dimensions

Height: 10.25"

Width: 17.3125"

Depth: 21.50"

Power Cart Specifications

Electrical Configuration: hospital-grade cord & NEMA 5-15 plug

Vertical Power Strip: (4) 15-amp outlets*

Battery Type: Maintenance-free sealed; lead-acid battery with suspended electrolyte; leak-proof

Output Specs

Power Capacity: 600 watts/750 VA

Nominal Voltage: 120 V

Connections: (8) NEMA 5-15R

Input Specs

Voltage range for main operations: 82-143V

Cord Length: 8 feet (2.44 meters)

Maximum Current: 12A

Input Breaker Capacity: 15.0 A

Top Workspace: 18.81" (w) x 23.81" (d)

(2) 6.36" high x 23.81" deep drawers; ball bearing slides

(4) individual tracking casters with break mechanism

Weight: 165 lbs. (based on common set-up); weight will changed based on added accessories

Exterior Color: custom color options available

LED Panel showing percentage of battery life remaining

Centralized locking system for drawers is available

Latex-Free

*Vertical Power Strip is MOV Surge & EMI Filter & Breaker; ETL listed to acceptable UL & CSA standards in US and Canada; is RoHS EU Directive 2002/95/EC Compliant

MicroCool™ Refrigerator Specifications

HP Compressor: 1/20

Nominal Voltage: DC 12/24V

Ambient Noise Level: less than 35 decibels

Refrigerant: R134a/42g

Maximum Heat Rejection: 164BTU/hr

Storage Capacity: 1360 cubic inches, .79 cubic feet, 20 L

*For additional refrigerator specifications, please refer to the MicroCool™ spec sheet
